

## DIVISION OF CHEMISTRY

### Expanded Statement of Institutional Purpose

#### Mission Statement

Chemistry, the central science, is an active discipline vital to human existence and essential to the understanding of industrial, economic, and environmental issues. The mission of the Division of Chemistry is to instill an understanding of chemistry and its relevance through quality teaching, scholarly and professional activities, and service. In a world that is becoming increasingly more technical and complex, providing chemical instruction with the depth, breadth, and rigor for students to meet this need is critical.

#### Goal Statement

The Division of Chemistry will:

1. Provide expert instruction in all classroom settings: lectures, labs, recitations, etc.
2. Provide students competitive opportunities for scholarship, employment, and other / hands-on experiences with qualified faculty mentors.
3. In a personalized environment, educate students to think critically and independently, and to improve communicative, creative, analytic and information gathering skills.
4. Prepare students who choose to pursue graduate degrees upon graduation either in chemistry or the health sciences.
5. Prepare students who choose to pursue employment upon graduation in a science related field in business/industry/education.
6. Provide service courses for other academic and professional programs, and for the general education experience
7. Meet or exceed standards of an accredited chemistry program as established by the American Chemical Society (ACS).

### Program Intended Educational Outcomes – 2003 - 2004

#### Outcomes/Objectives

- 1a. Courses will be taught by faculty with appropriate expertise and excellence in their fields of teaching.
- 1b. Students will learn and demonstrate an understanding of theoretical chemical principles.
- 2a. Qualified faculty mentors with appropriate expertise in their fields will offer chemistry laboratories, scholarship, employment, and other hands-on experiences for students.
- 2b. Students will practice and demonstrate chemistry principles via laboratory experiments, undergraduate research / employment, discussions out of class, etc.
- 3a. Students will learn and demonstrate the ability to critically think about chemistry principles, and to communicate such items via oral and written means.
- 3b. Class size will be limited to what is pedagogically most appropriate and / or meets ACS criteria.
- 4a. Students desiring graduate degrees will have the opportunity to develop and demonstrate their abilities to meet entrance requirements: tests, scholarship, etc.
- 4b. Appropriate tracks of study will be provided for professional chemistry and allied health majors.
- 5a. Students desiring employment upon graduation will be prepared for business, industry, or education.
- 5b. Appropriate tracks of study will be provided for professional chemistry and education majors.
6. In addition to offering courses for the campus general education program, the division will provide chemistry courses that can meet the needs of both chemistry majors as well as other academic majors.
- 7a. The chemistry program will be accredited by the American Chemical Society (ACS), assuming that adequate resources are available to meet ACS criteria.
- 7b. The Division will continue to align the chemistry curricula at SUU with the nationalized ACS curricula.
- 7c. The Division will continue to utilize the nationalized ACS exams as final exams for each course in the SUU chemistry curricula.
- 7d. The Division will continue to require all graduating seniors to take the Educational Testing Service (ETS) field exams.

### Means of Program Assessment and Criteria for Success

#### Assessment Criteria and Activities

- 1a./2a. Only doctoral qualified faculty with demonstrated expertise and above-average performance in appropriate chemistry sub-fields will be hired, promoted, and retained in tenured positions. Faculty will annually attend faculty development activities to enhance subject knowledge and presentation methods.
- 1b./2b. Chemistry students will pass their major courses with a minimum grade of "C" or better. The average score on the ACS final exam by students in each chemistry course will exceed the 50<sup>th</sup> percentile. The average score on each section of the ETS field exams by graduating seniors will exceed the 50<sup>th</sup> percentile. Graduating seniors will also have had undergraduate research or employment experiences.
- 3a. A capstone course will assess each student's ability to communicate via a written and oral report, which will also evaluate prior "course embedded activities" requiring critical, logical, and analytical thinking.
- 3b. Sizes of classes will be monitored relative to scores on ACS final exams and ETS field exams.
4. Scores of students or entrance success relative to admittance standards in graduate chemistry programs will be tracked. In addition, Dental Admission Test (DAT), Medical College Admission Test (MCAT), and other relevant scores will be monitored for determining subject matter mastery. (Also, see 1b/2b above).
5. Placement of graduates will be monitored annually. Surveys of students and employers will assess chemistry graduates preparedness.
6. Surveys of general education students will be implemented to assess success of courses. Surveys of general chemistry will assess value of the Peer Led Team Learning project for this service class.
- 7a. The chemistry program has been submitted for accreditation by ACS and are awaiting a report from the ACS.
- 7b. For best practice and economy, only ACS approved courses will be included in the major curricula.
- 7c/7d. See item 1b./2b. above relative to requirements on ACS final exams and ETS field exams in chemistry.
