skills necessary to succeed in their respective disciplines.

II. The Applied Technology programs will provide service to related industries/ organizations at the local, regional, state, and national levels, and work in close cooperation with industry to train students to meet employers' needs as well as provide training for their employees.

III. The curriculum in the Applied Technology programs will consist of a blending of classroom courses in theory, methodologies and histories of the program disciplines as well as lab/field experiences incorporating hands-on application of these principles.

IV. The intent of the Applied Technology faculty and curriculum is to produce well-rounded graduates who are conversant with the content in their program discipline and who can proficiently apply that content in the employment and/or continuing education endeavors.

V. The Applied Technology programs will achieve a high level (80%) of placement in employment and/or continuing education.

Expanded Statement of Institutional Purpose: (cont.)

Integrated Engineering Mission Statement:

The mission of the Integrated Engineering program is to support and realize with excellence the overall mission and vision of the University and to provide a broadly based, cross disciplinary engineering education founded upon a design-oriented curriculum with integrates several disciplines into a whole, enabling graduates to undertake the wide variety of design and manufacturing challenges that modern industry faces.

Objectives:

The objectives for the Integrated Engineering program are:

- A. a solid understanding of the fundamentals of mathematics, physical science, and engineering science, which re-occur in diverse technical applications and form the foundation for work in all fields of engineering;
- B. the ability to practice engineering design and analysis and to integrate several engineering concepts into a system or process;
- C. the ability to pursue professional careers in multidisciplinary fields by

Program Intended Educational Outcomes: (cont.)

Integrated Engineering:

The standards and competencies that the student will have met and achieved at the time of graduation are expressed in terms of the characteristics of the program's graduates, which are the educational outcomes required for accreditation by the Accreditation Board for Engineering and Technology (ABET). Each graduate will have:

- A. an ability to apply knowledge of mathematics, science, and engineering;
- B. an ability to design a system, component, or process to meet desired needs;
- C. an ability to function on multidisciplinary teams;
- D. an ability to identify, formulate, and solve engineering problems;
- E. an understanding of professional and ethical responsibility;
- F. an ability to communicate effectively;
- G. the broad education necessary to understand the impact of engineering solutions in a global and societal context;
- H. a recognition of the need for, and an ability to engage in life-long learning
- I. a knowledge of contemporary issues;
- J. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Means of Program Assessment and Criteria for Success: (cont.)

Integrated Engineering:

The Integrated Engineering program has recently been reviewed by a team from ABET. The visit was positive and the team made a few recommendations. These include reconsideration of course pre-requisites, re-designing the curriculum to ensure that the courses support the design projects, and developing assessment tools for the Program Educational Objectives. As stated in the program self-study, the Program Educational Objectives and the Program Outcomes and their achievements will be assessed using the following tools:

- Course Assessment: performed by the faculty every offering of the course;
- Review of Design Projects: performed by the instructor and other faculty and representatives from the industry every offering of the course;
- Fundamentals of Engineering (FE) exam: results will be reviewed at the end of the academic year;
- Alumni Survey: conducted every two years; Last survey conducted Nov 2004.

Integrated Engineering:

the development of effective teaming abilities and communication skills;
D. the ability to pursue advanced studies and/or assume leadership roles along diverse career paths;
E. a strong appreciation for and commitment to ethical responsibilities, professionalism, lifelong learning, and a concern for society and the environment.

Special Note: The objectives, educational outcomes, and assessment criteria for the Integrated Engineering Program are stated in a format consistent with ABET's guidelines for accreditation.

Integrated Engineering:

Means of Program Assessment and Criteria for Success: (cont.)

Integrated Engineering:

- Employers Survey: conducted every two years. This survey will be conducted in September 2006
- A two-loop process (discussed in detail in the program self-study) will be used to assess the Program Educational Objectives and the Program Outcomes. Assessment of the Program Outcomes will be performed on a two-year cycle, whereas the assessment of the Program Educational Objectives will be performed on a four-year cycle, benefiting from two full iterations on the Program Outcomes. The Assessment is greatly facilitated by various mappings that have been developed as part of the preparation of the program for accreditation. These mappings are discussed in great detail in the program self-study.
