

WILLIAM HARRISON

COLLEGE OF SCIENCE SENATOR

My name is William Harrison and I am running for College of Science Senator for the upcoming 2022-2023 academic year. I love being a student in the College of Science and I plan on graduating with a Bachelors of Science in Chemistry with a minor in Biology and Spanish. Being raised in a family with Latin American and Japanese influences, I am aware of the struggles for minorities in science. As Senator of the College of Science I want to unify all departments within the college and bolster support for minority groups. I also want to make the College of Science an open place to anyone who wants to learn and benefit the world with science. Lastly, I aspire to provide our future scientists in the college with all the means necessary to achieve their greatest goals. I am currently an Ambassador for the Honors Program and have been in many local and foreign leadership positions. I believe that I acquire the fundamental skills to make our institution a safer and better place for scientists.

Key Issues:

- Create a better learning environment by updating lab manuals and activities to provide the best education.
- Supporting the mental health of busy science students.
- Providing students with more opportunities for research by advocating for an increase in funding for undergraduate research.
- Supporting minority groups through working with the Center for Diversity and Inclusion.
- Providing equal representation for majors by having representatives from all departments within the College of Science.
